

WebPipe CMS is an enterprise Content Management Solution developed on the latest technologies from Microsoft, including ASP.NET 3.5 and SQL Server.

This platform provides WebPipe with the ability to store a variety of data, such as text, images, videos, and audio files, in a single system. The system provides users with fast and easy access to all the information their organizations need day to day.

The design of the system allows for CMS features to be selected a-la-carte to meet your organization's needs. This approach allows your organization to have the capabilities of presenting information using the latest web technologies without having to purchase features you don't want or need.
