

Top 10

Reasons to use AlphaTrust® e-Sign

- 1 Branding**

Your solutions come first! Passing documents “outside” to be signed is unnecessary and creates greater risk. Drive greater value and higher margins by providing e-Signature services within your application. Enhance your brand!
- 2 Customer Experience**

Separate authentication or a different user interface is unintuitive and presents poorly. You’ve spent significant resources refining a specific and unique customer experience- don’t force the use of a separate tool for e-Signature.
- 3 Control and Execution**

Your tech stack is your environment, and under your control... so why isn’t your e-Signature solution? You control the authentication, process flow and all other aspects, providing the best experience for your customer and your value proposition.
- 4 Small Screen Optimization**

Adobe documents can be a challenge on small screens: there’s a better way. AlphaTrust Web Forms® can easily create appropriately sized forms automatically that support all screen formats, from laptops to tablets and phones.
- 5 Strategic Alignment**

AlphaTrust is focused on delivering the best solution and business terms geared specifically to software companies for embedding e-Signature solutions. AlphaTrust OEM solutions are software company centric.
- 6 Faster with Lower Bandwidth Requirements**

Hosting e-Signature in your tech stack provides many benefits- allowing e-Signatures to be managed without sending off documents increases overall performance, lowers bandwidth, improves the client experience, and creates one compliance, risk, and security story.
- 7 Customer Interaction**

It’s your application and your customer, so why aren’t you dealing with them directly for e-Signature? AlphaTrust e-Sign will become a part of your solution- not a separate bolt-on, and no one from AlphaTrust will be speaking separately with your customers.
- 8 Lower Risk**

Eliminating the need to send the transaction and documents “outside” provides a more streamlined, manageable and secure implementation.
- 9 Faster Implementation**

AlphaTrust has several implementation options, including everything from a prompt-driven wizard to a detailed API.
- 10 Lower Cost, Higher Margins**

AlphaTrust understands the need for software service providers to add value and make money. Our objective is to provide the best solution and the best value in the market.
